AOSafety Installs New Lens Monogram Equipment

AOSafety announces the installation of new lens laser monogramming equipment in its Chickasha, Oklahoma and Plymouth, Indiana optical manufacturing facilities.

This state-of-the-art process means exceptionally clear and precise monograms to help ensure that all safety eyewear complies with the ANSI Z87.1-2003 Standard.

In addition, the bar code for each work order ticket contains the instructions on the monogram information required for that particular order, ensuring the correct monogram application.

The installation of this new equipment is another example of Aearo's commitment to world-class manufacturing, improved processes and better quality.

**AO+ is your assurance
that the Polycarbonate
safety lenses in your
frame meet the ANSI
Z87.1-2003 Standard for
High Impact Protectors.**
